

# COREMAX 48

**Keep The Cores Off Your Greens And Your Crew Ahead Of Schedule.**

## Client Testimonial

*"My crew loves the fact that there is far less back breaking work during our core aerations, the turf on the greens has responded great due to less abrasion, and the members are thrilled that the putting surfaces recover more quickly than ever. In my opinion you can't afford not to use this revolutionary piece of equipment during your most important maintenance practice of the year."*

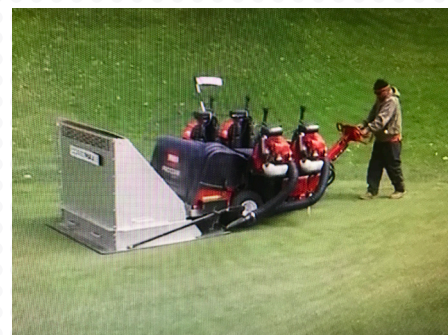

**- Ken Flisek, CGCS The Club at Nevillewood**

**Rebuild Greens Through Aerification**

**Clean Unbridged Holes**

**Reduce Labor**

## Take The Negativity Out of Aerification

- Accomplish Superintendent's Agronomic Impact on Schedule Due to Lessening Weather Related Interruptions.
- No More Pushing and Shoveling Cores from the Aerified Area.
- Only 3-5 Crew Members Needed for Process.
- Satisfy Player Experience By Minimizing Playing Interruption.

## Meet Your Agronomic Impact and Productivity Curve

- No Bridging of Coring Holes.
- Mitigated Destabilization and Physical Contamination.
- Minimum 30% Increase in Topdressing Modification.
- Enhancement of Solid Tine Venting to Reduce Root Shear, Stabilize Turf And Provide Immediate Playability.
